## EDUCATION

---

**Vellore Institute of Technology, Bhopal, India** (Expected - May 2028)  
B.Tech - Computer Science and Engineering & Specialization in Cloud Computing  
**Sanatan Dharm Education Centre – 10<sup>th</sup> | Sanatan Dharm Education Centre – 12<sup>th</sup>**

## TECHNICAL SKILLS

---

**Cloud & DevOps:** Amazon Web Services (AWS EC2, AWS Lambda, AWS SNS)

**Programming Languages:** Python, C++, SQL, JavaScript (Node.js)

**Data Science & Analytics:** Pandas, NumPy, Matplotlib, Seaborn, Data Cleaning, Data Manipulation, Exploratory Data Analysis (EDA), Statistical Analysis

**Web Security & Networking:** SQL Injection Detection, Computer Networking,

**Databases:** Microsoft SQL Server (MSSQL), Relational Databases, RDBMS

**Tools and collaboration:** Git, GitHub

## PROJECT

---

**SQL Injection Detection & Cloud Threat Alert System | Node.js, MSSQL, AWS Lambda, AWS SNS, Regex**

**GitHub Repository - [SQL Injection Detection](#)**

Designed and developed an automated security application to detect, log and mitigate real-time SQL Injection (SQLi) attacks.

Built a custom Regex intrusion detection engine in Node.js to intercept and block malicious payloads like UNION SELECT and DROP TABLE.

Integrated AWS Lambda and AWS SNS to establish an automated cloud pipeline for real-time threat notification and alert dispatching.

Engineered dynamic IP-blocking routines and structured audit logging within MSSQL to isolate hostile traffic and maintain forensic records.

Trained and validated pattern matching algorithms against known attack vectors, ensuring reliable payload identification and zero database compromise.

## PROFESSIONAL EXPERIENCE

---

### Information Technology Summer Intern

*Indian Ordnance Factory Services, Ministry of Defence, Govt. of India, Kanpur, UP, May 2026 – June 2026*

Gained hands-on exposure to enterprise IT infrastructure within a high-security defence manufacturing unit (Small Arms Factory, Kanpur).

Monitored and analyzed LAN architecture, server room operations, and network security protocols across connected defence enterprise systems.

Evaluated secure operating system configurations, endpoint security frameworks, malware protection, and application access controls.

Managed circular/notice distribution via locally hosted web servers and maintained database records for enterprise production data.

Authored a comprehensive technical internship report detailing IT infrastructure, antivirus monitoring, hardware troubleshooting, and cybersecurity management.

## CERTIFICATIONS & BADGES

---

- AWS Cloud Quest: Cloud Practitioner – Training Badge | Amazon Web Services | July 2026
- Google AI Essentials V1 by Google | July 2026
- Exploratory Data Analysis | NASSCOM FutureSkills Prime | September 2026
- The Bits and Bytes of Computer Networking Google / Coursera | December 2025

## ACHIEVEMENTS & ACTIVITIES

---

- Participant — Adobe University Hackathon organised by Adobe via Unstop | August 2026
- Completed AWS Cloud Quest: Cloud Practitioner on AWS Skill Builder — hands-on cloud labs | July 2026
